

The Planning Process:

Socioeconomic aspects of planning

ARCH 305 Architecture and Town Planning

DR IRFAN AHMAD RANA

Week 1: Review

- What is planning/town planning?
- What are the aims of planning?
- What are the levels of planning?
- Why we need planning?

Contents

- The Planning Process
- Socioeconomic aspects of planning
  - Acceptability
  - Accessibility
  - Affordability
  - Usability
  - Suitability
- Forms of Planning

The Planning Process

Revisiting Planning

- Planning is a rational process for formulating and meeting objectives
- The formulation of objectives, therefore, is an essential task that must be undertaken before plans can be prepared

Basic Concepts and Definitions

- ***Objective*:** a goal or end toward the attainment of which plans and policies are directed
- ***Principle:*** a fundamental, primary, or generally accepted tenet/idea used to support objectives and prepare standards and plans
- ***Standard*:** a criterion used as a basis of comparison to determine the adequacy of plan proposals to attain objectives

Basic Concepts and Definitions

- ***Plan:*** a design that seeks to achieve agreed upon objectives
- ***Policy:*** a rule or course of action used to ensure plan implementation
- ***Program:*** a coordinated series of policies and actions to carry out a plan

The Planning Process

1. Determine objectives
2. Analyze existing situation
3. Consider alternative courses of action
4. Select the best course of action
5. Devise detailed procedures for carrying out the selected course of action

Socioeconomic Aspect of Planning

Socioeconomic aspects of planning(1)

- The economic climate of a city is largely determined by physical infrastructure and social policies.
- Urban Planners/Engineers commonly deal with "physical infrastructure" likes of
    - Construction of road/highways
    - Planning of new cities, neighborhoods
    - Construction of civic facilities
    - Municipals facilities
    - Powers stations etc

Socioeconomic aspects of planning(2)

- Most physical infrastructure projects directly or indirectly affected by socioeconomic dynamics, i.e., social processes around waste management and recycling
  - The physical part may just be a bin and the data needed about waste quantities, density, type and this will help in deciding the size and material of the bin.
  - The challenging part of engineering involves understanding **attitudes, behaviors and reactions of people** using this simple technology regularly, leading to a much larger outcome of recycling targets and resource conservation.

Socioeconomic aspects of planning(3)

- Planning practices and research need to have a better understanding of the **social processes** which have a sustainable impact on their physical infrastructure.

- All residents should have **equitable access** to resources, such as housing and water, the absence of which can lead to unhygienic and dangerous living conditions and more importantly **Regional Conflicts and Disparities**.

Socioeconomic aspects of planning(4)

- The physical form is a variable of the social and built pattern of the city.
  - –Acceptability
  - –Accessibility
  - –Affordability
  - –Usability
  - –Suitability

Socioeconomic aspects of planning(5)

Acceptability: satisfactoriness by virtue of conforming to approved standards

- Acceptability is a Dynamic Process
  - Acceptability does not end with a particular outcome or result; rather it is an ongoing process.
- **Community**: acceptance of various project by various affected communities i.e. Kalabagh Dam
- **Socio-Political**: satisfied the existing socio-political norms
- **Cultural**: must incorporates the cultural values
- **Gender**: gender and acceptability has become crucial in planning

Socioeconomic aspects of planning(6)

Accessibility is the degree to which a product, device, service, or environment is available to as many people as possible.

- Accessibility can be viewed as the **"ability to access"** and benefit from some system or entity.
- It is more related with deprived population.
- Mode of accessibility
  - Transportation
  - Hierarchy of services

Socioeconomic aspects of planning(7)

Affordability: The extent to which something is affordable, as measured by its cost relative to the amount that the purchaser is able to pay; e.g., affordable housing, green technologies, solar energy etc

- Factors influencing affordability
  - Income level
  - Household size
  - Geographic variation
  - others

Socioeconomic aspects of planning(8)

Usability is the ease of use and learnability of a projects and policies.

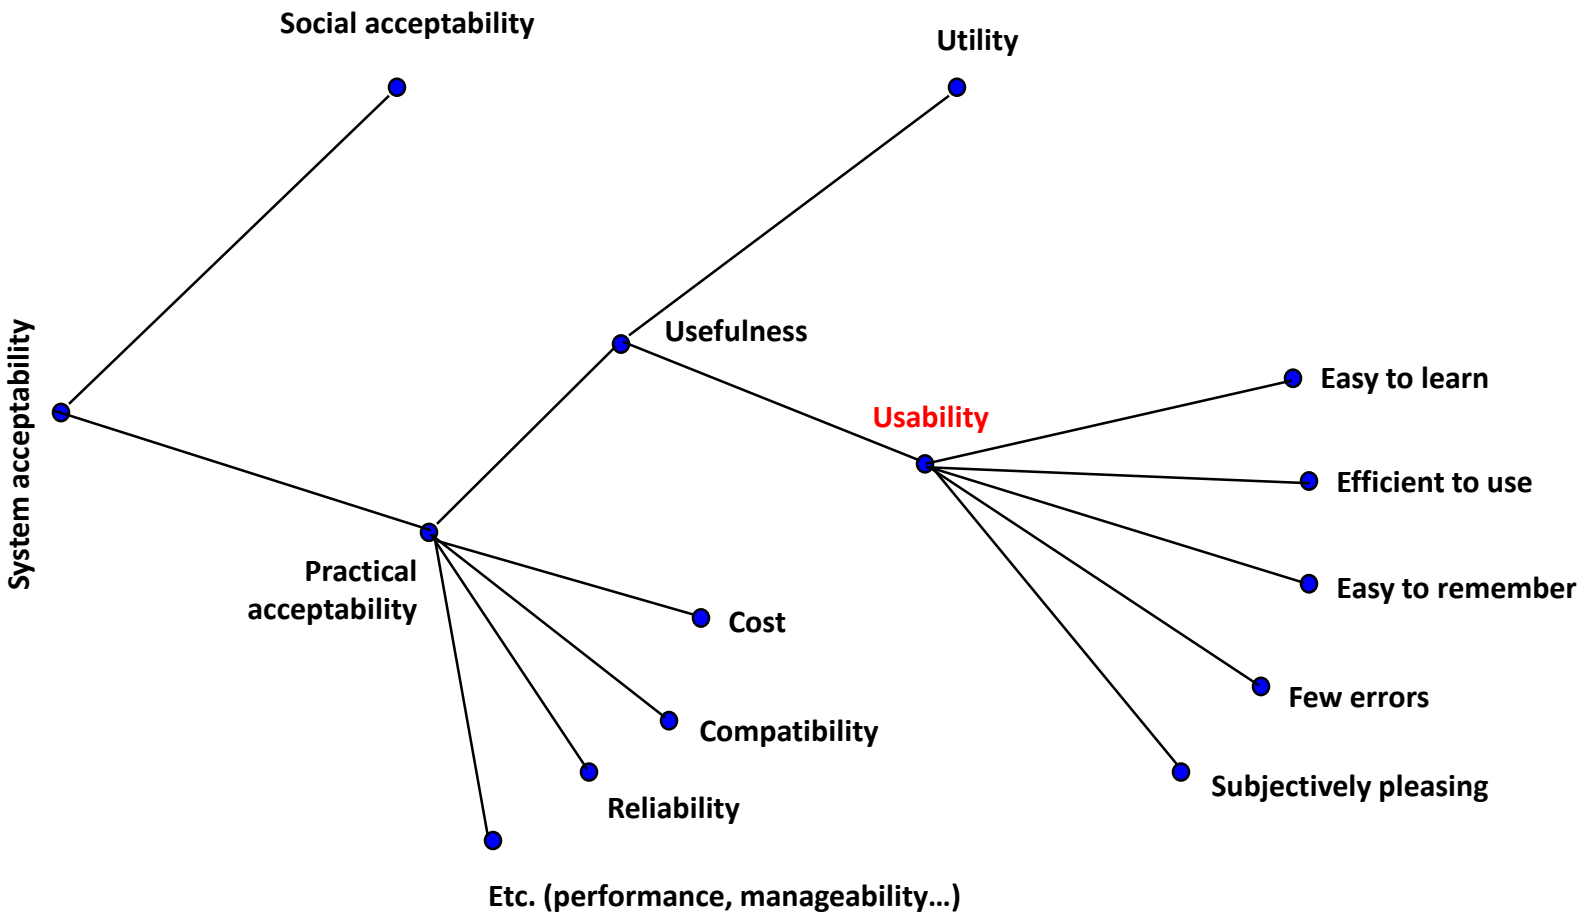

- The primary notion of usability is that *an object designed with a generalize users' psychology* i.e.,
  - More efficient to use—takes less time to accomplish a particular task
  - Easier to learn—operation can be learned by observing the object
  - More satisfying to use

Socioeconomic aspects of planning(9)

Suitability: the quality of having the properties that are right for a specific purpose

- Purposeful allocation of land and recourses
- Suitability analysis: site analysis
- Suitability depends upon social, economic, environmental, geo-political, cultural factors.
- For example: suitable site for an airport

Socioeconomic aspects of planning(10)

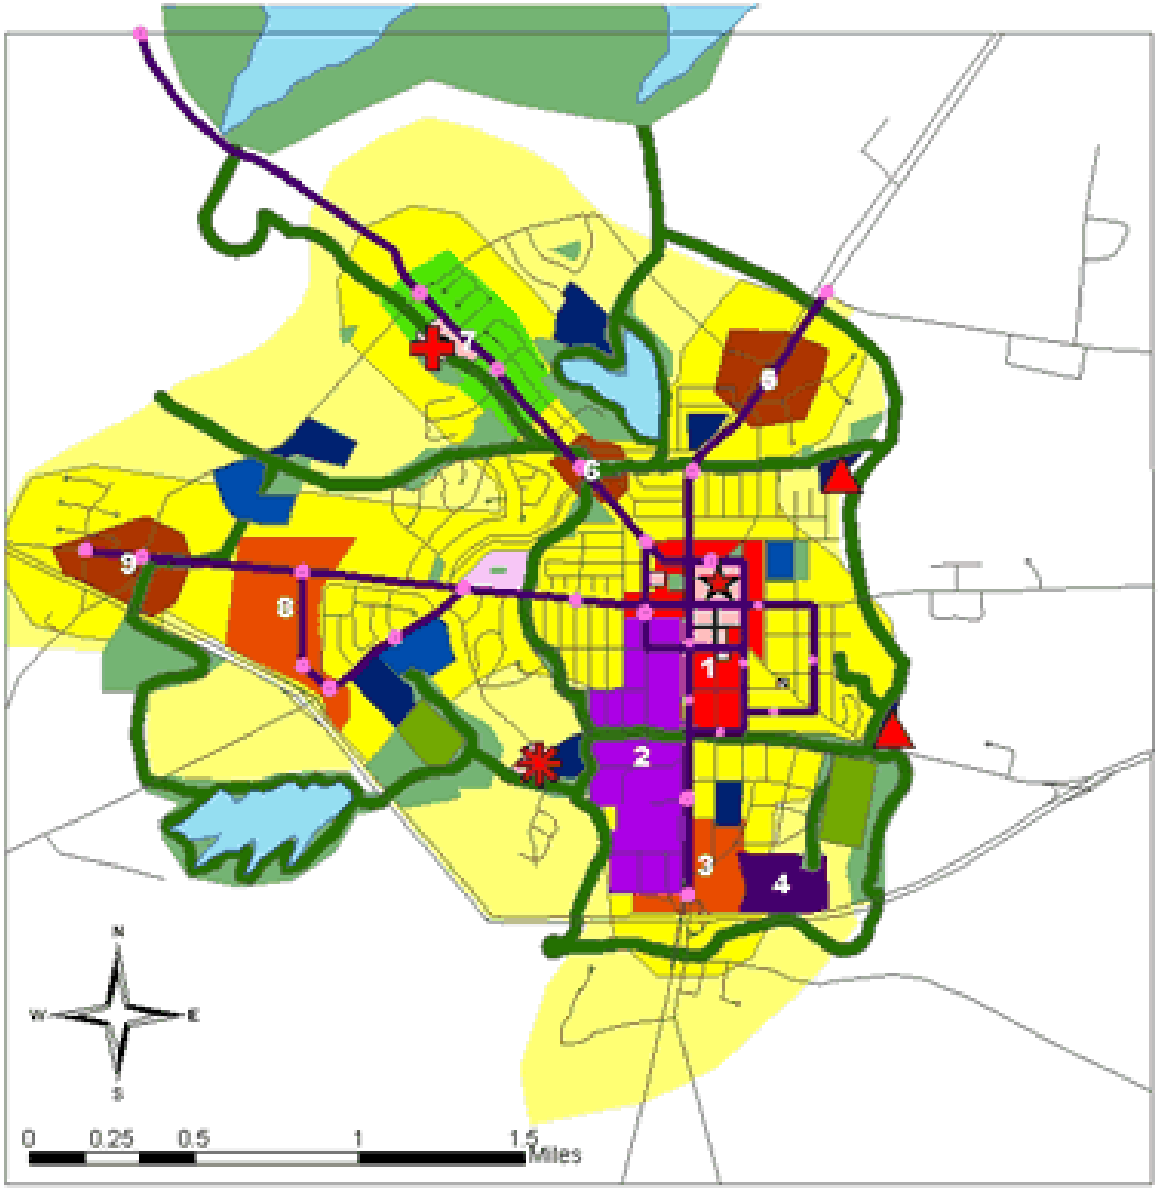

Forms of Planning

Forms of Planning (1)

- **Land use planning** is a public policy exercise that designates and regulates the use of land.
- The final outcome of Land use planning is document/plan that highlights
  - allocation and zoning of land for specific uses
  - regulation of the intensity of use, and
  - formulation of legal and administrative instruments that support the plan

Comprehensive Land Use Map

- Greenway
- Community Recreational Facility
- Park
- Elementary School
- Jr. High School
- Senior High School
- High-Density Residential
- Low-Density Residential
- Old Town
- Industrial District
- Office Park
- Mixed-Use Centers
- Industrial Park
- Neighborhood Shopping
- Civic Building
- Transit Line
- Bus Stop
- Lake
- Roads

1. Old Town
2. Earth Works Paper
3. Southgate Crossing
4. Southpark
5. North End/ Sleepy Pond Center
6. Fir Tree Center
7. St. Bart's Medical Park
8. Westgate/ Spruce Rock
9. Spruce Rock Center

- St. Bart's Hospital
- City Hall and Civic Center
- Nursing Home
- Wastewater Treatment Plant

Forms of Planning (2)

- **Physical Planning**
- It is the planning of an area's physical structure/ land use, communication, transportation, municipal utilities and others.
- It uses land use plan as a framework to ensure optimal physical infrastructure in an area.
- It is more concentrated on provincial level/ district level.

Forms of Planning (3)

Allocative Planning

- It is a kind of regulatory planning.
- It is concerned with co-ordination, the resolution of conflicts to ensure efficiency through evolving policies.
- It works to enhance the functionalities of the existing system.
  - Short-term to ensure stabilization of up and downs of the economy.
- For example:
  - National level fiscal and monetary polices i.e. fixation of change in oil prices on monthly bases.

Forms of Planning (4)

Multi or single Objective Planning

- Every type of planning has some goals/objectives to achieve.
- Planning may have single or multiple goals or objectives.

Any idea about Goal and Objectives

Forms of Planning (4)

Multi or single Objective Planning

- A **goal** is an idea and is expressed in abstract term i.e.
  - to improve the public transport in Islamabad
  - to improve the social status of the people of Pakistan

- An **objective** is more specific and is capable of both attainment and measurement. i.e.
  - to upgrade government high school to degree college etc.

Forms of Planning (5)

Indicative and imperative planning is concerned with methods related to implementation of planning/plans.

- **Indicative planning**
  - It merely lay down general guidelines.
  - It is advisory in nature i.e. policy document
- **Imperative planning**
  - It is more guided and involves specific directives or procedures i.e.
    - Environment Assessment Mechanism
    - Map approval procedures

THANK
YOU!
