

Approaches to Planning

ARCH 305 Architecture and Town Planning

Dr. Irfan Ahmad Rana

Review

Socioeconomic aspects of planning

- Acceptability
- Accessibility
- Affordability
- Usability
- Suitability

PLANNING APPROACHES

- Considerable changes in the intellectual basis of planning and wider socio-economic framework in which planning takes place

- Three distinct stages:
  a) mid 1800s – mid 1960s (Master Plans/comprehensive / rational)
  b) mid 1960s – early 1970s (Systems view of Planning)
  c) 1970s onwards (Participatory Planning)

URBAN PLANNING AS A PROCESS

Fragmentary approach to planning (usually being exercised)

- Sectoral fragmentation, Health, Social, Economic, environment, SWM, security etc.
- Solutions for planning problems are sought in particular sectors.
- Neglecting sectoral interrelationships.

URBAN PLANNING AS A PROCESS

- top-down approach in decision-making and lack of participation
- Weak implementation framework
- lack of evaluation and monitoring of results
- Consequences of this approach
  - Failure of development plans
  - Mono-functional plans
  - Rigid plans which don't incorporate people needs

MASTER PLANNING

- Traditional town planning
- Planning as concerned with the production of plans/blueprints
- Detailed description of some desired future end state
- Survey-analysis-plan

The Plan Commission

- The law delegates the city planning function to advisory bodies known as plan commissions.
- This delegation entrusts this important municipal function to a continuing body of public officials and citizens qualified for the task.

The Comprehensive Plan

Importance

- A master or comprehensive plan for the physical development of the city.
- The plan is intended to be made with the purpose of guiding and accomplishing a coordinated, adjusted, and harmonious development of the city.
- A comprehensive plan is essential to the sound guidance of urban development and redevelopment

The Comprehensive Plan

Scope and Content

- Very general and very broadly defined, implicitly extending to all phases of city development
- The local plan commissions to identify the elements
- Each individual plan element would be intended to deal with the specific developmental or environmental problems.

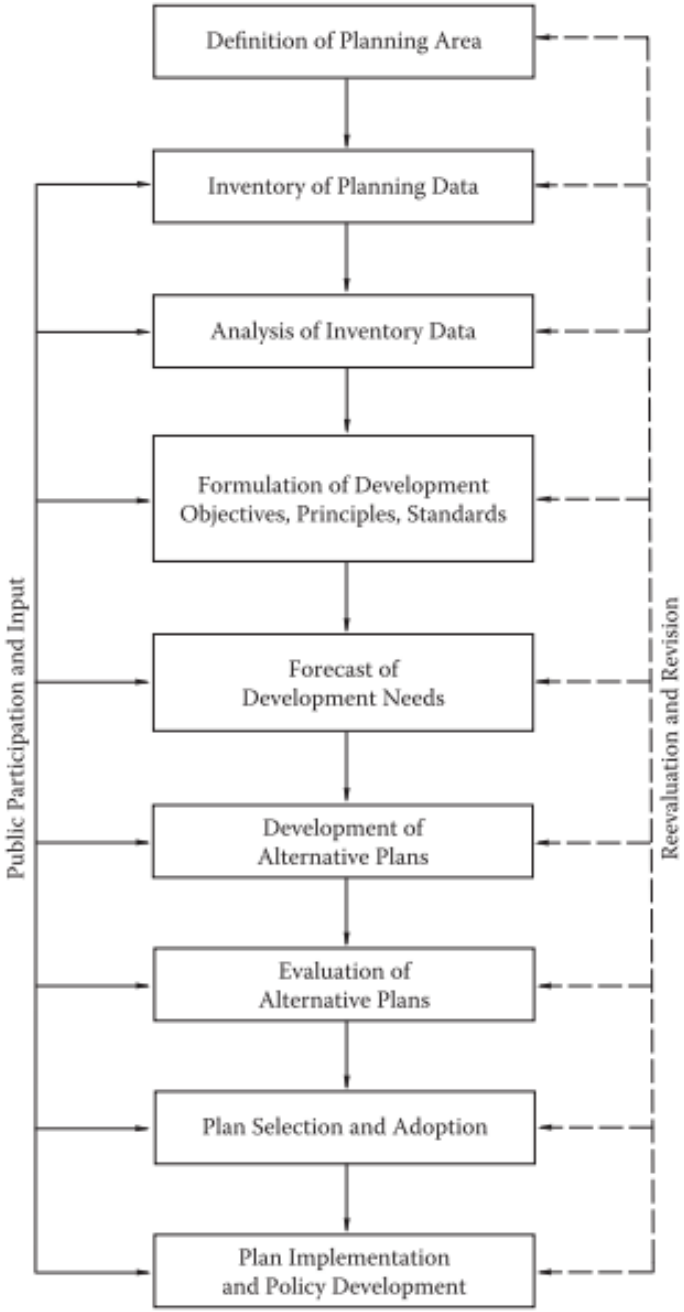

The Comprehensive Plan

Scope and Content

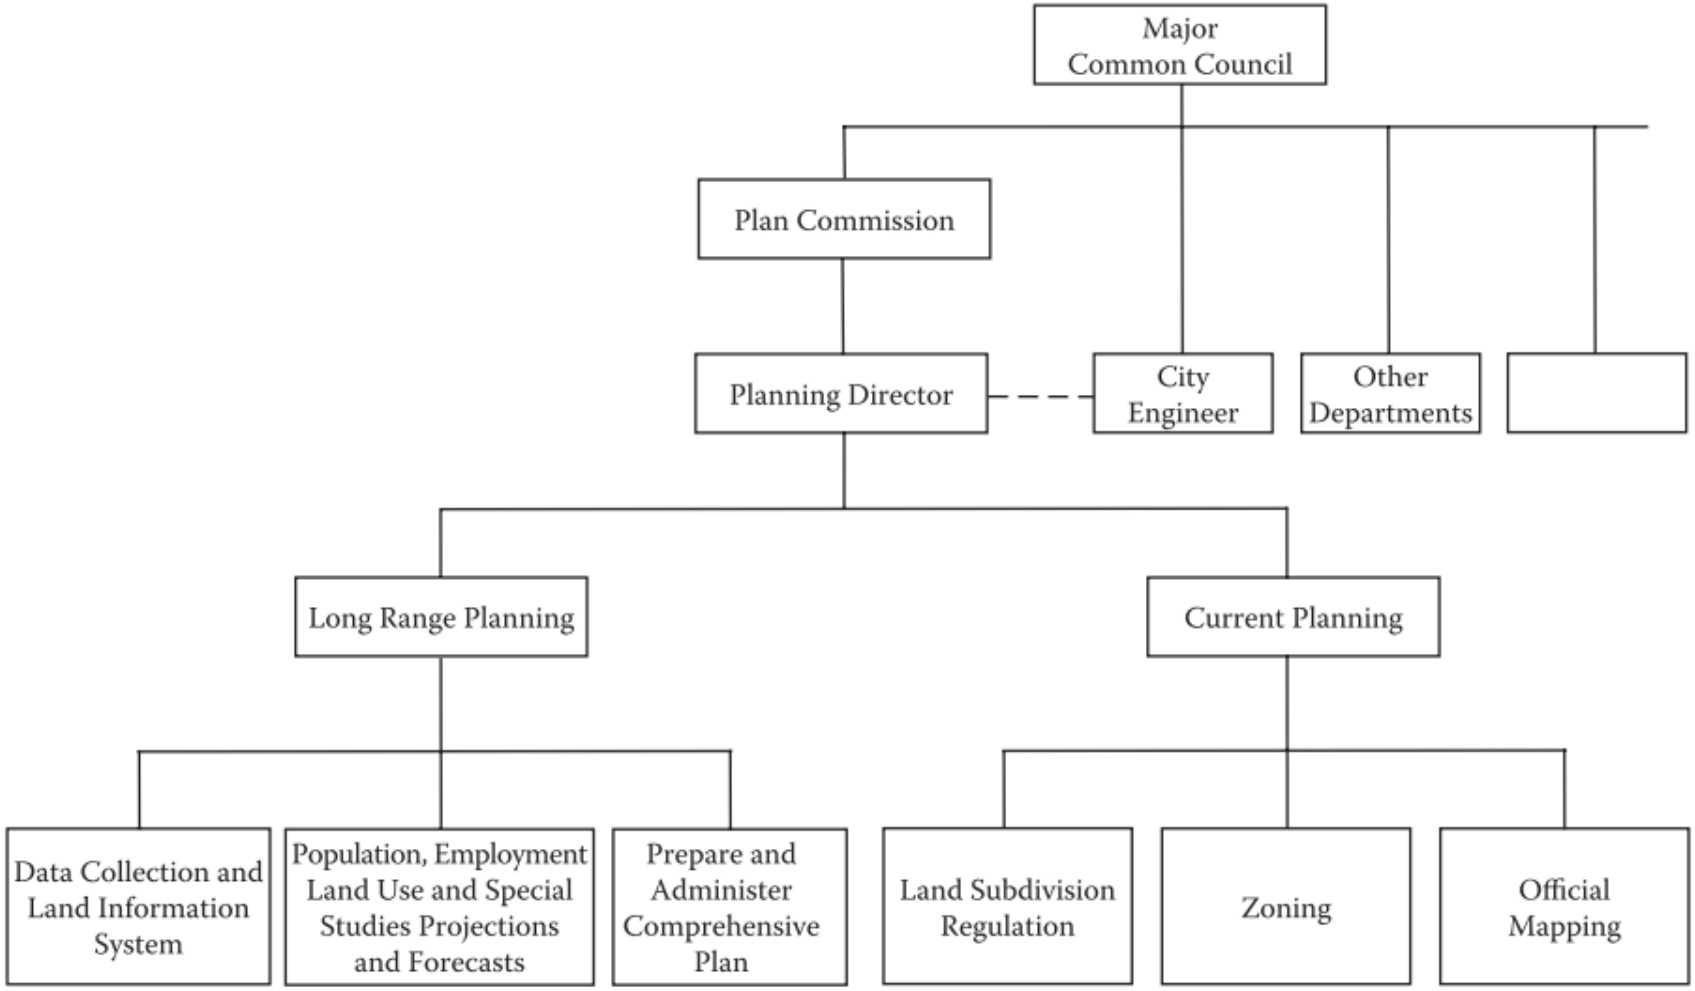

A comprehensive plan is to specifically consist of the following:

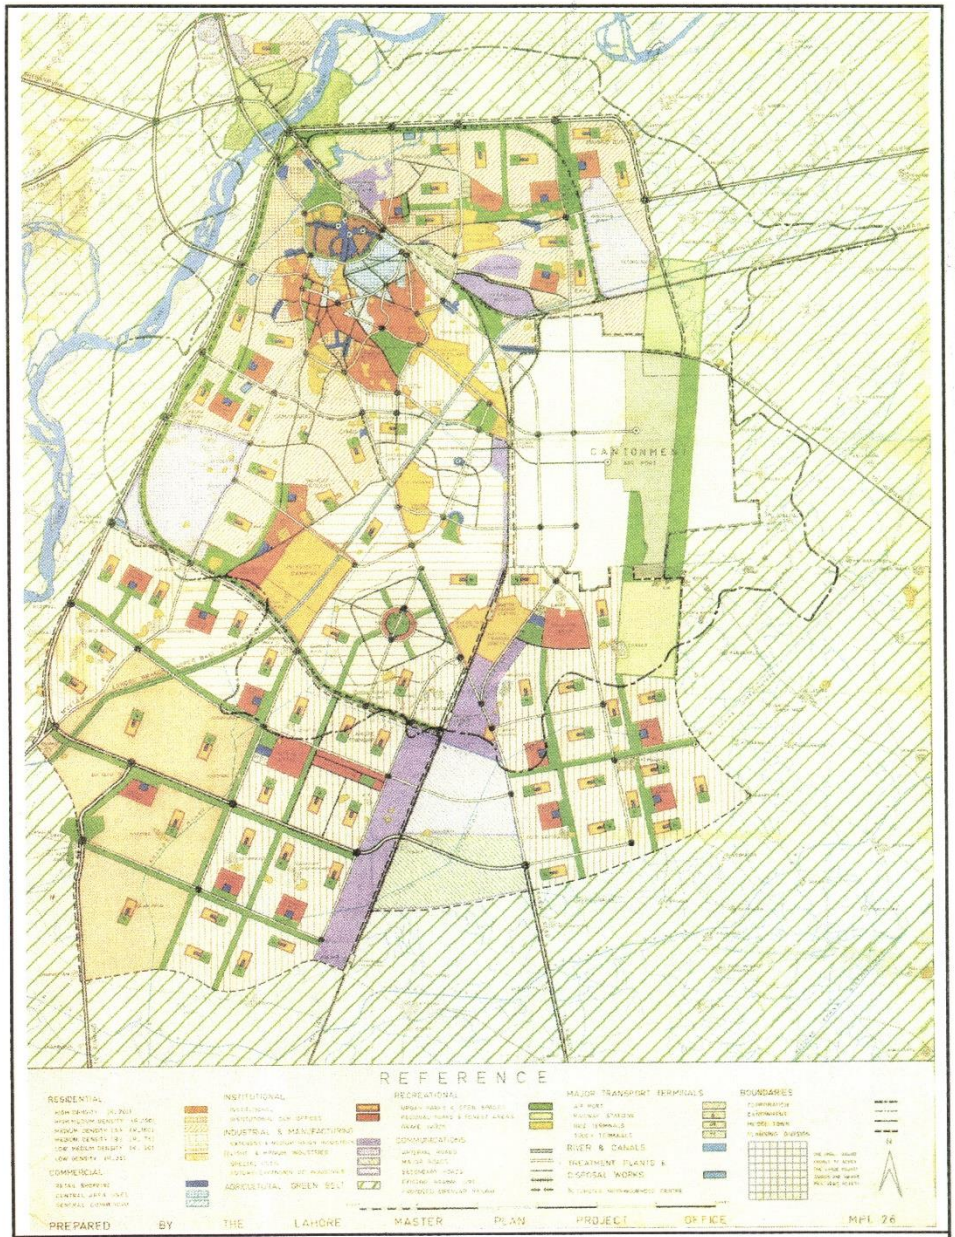

1. Issues and Opportunities
2. Land Use
3. Housing
4. Transportation
5. Utilities
6. Community Facilities
7. Agricultural, Natural, and Cultural Resources
8. Economic Development
9. Intergovernmental Cooperation
10. Implementation
11. Special Provisions

Example of Land Use Plan Map

Legend

SYSTEMS PLANNING

- Concerned with managing and controlling a particular system(s).
- Systems planning was based on the concept that planning constitute a distinct type of human activity, concerned with controlling a particular system(s).
- Likewise, spatial planning/URP is sub-class of planning deals with controlling & managing a system, the Urban & Regional System.

SYSTEMS PLANNING

The fundamental to the Systems Planning concept is

- the interaction between two parallel systems:
  - The planning or controlling system(itself), and
  - the system (or systems) it seeks to control
- constant interaction is very valuable during planning process
- It derived from newer sciences: **cybernetics**

Difference between the two Approach

- The older planning approach was concerned to set out the desired future end state in detail in terms of land-use pattern(Master Plan)
- Whereas, new approach concentrate on the achieving the objective of the plans and the alternative ways to achieve them (Structure Plan).

Difference between the two Approach

- Older approach follows: survey-analysis-plan sequence
- Whereas, systems planning **(cybernetic-based planning)** focused tend to be a continuous process, repeat certain steps to achieve desirable optimal solution

- Set out in writing rather than in detailed maps

REASONS FOR THE SHIFT

- Direct response to the criticisms of the master planning
- increasing reliance on computers (cybernetics), and technology
- opening up of the town planning profession to other disciplines
- the quantitative revolution in the 1960s

THANK
YOU!
